

# AWS well-architected review from InfraGuard

## Import and Sync AWS account with InfraGuard

- Login into your InfraGuard account and visit ADD-ONS from left menu
- Link for ADD-ONS: <https://app.infraguard.io/add-ons>
- Click on manage accounts and Add account from the account page
- Enter required details and submit
- You can select "Set Default" for an account to make it appear by default when you log in to WA from IG. IG will keep the default account synced
- Now, click on the back button and select "AWS Well-Architected"

## Adding Workload

- Once you are on the Well-Architected page select "Add Workloads"
- Add relevant information and click on next
- Select Workload properties among the four lenses presented to you
- Now, click submit

## Perform Well-Architected review

- Select any workload from the list of workloads available
- Select overview or milestone depending on where you want to start WA from
- Click continue
- Visit each lens to get the list of questions related to that lens
- These questions can be filtered based on improvement plans
- Select questions to get the list of options to choose from
- Select the "I" button next to options to get more details about that question
- Click on the Autofill button to get relevant information from the AWS account if available
- Finally, after answering the question click on save button to sync your changes to AWS WA
